(54) Title: LIQUID DISPENSING DEVICE

WO 2005/099908 A1

(57) Abstract: The present invention is related to a battery-operated liquid dispensing device comprising a valve which is operated by the trigger (4), and which comprises a valve body (22) with a resilient dome-shaped portion (24), which closes off the valve by being biased against the valve seat (25). By pulling the trigger, the dome-shaped portion (24) is pushed away from the seat, thereby creating a passage for the liquid to pass to a gear pump (13) and nozzle (5).
